Overall Churn	Latest MRR	High-Risk Customers	High-Risk MRR	Average CAC
52.17%	**£292.6K**	**93**	**£82.2K**	**£200.04**

Key Findings	Recommended Actions
• Starter churn is 70.51%, vs. 22.00% for Enterprise. • Monthly-billed customers churn substantially more than annual customers: 60.51% vs. 40.32%. • Average monthly churn improved from 6.81% in 2022 to approximately 3.6% by 2024–2025. • 93 active customers, representing 32.40% of the current customer base, are classified as High Risk. • £82.2K MRR is tied to High-Risk accounts, concentrated in Business and Enterprise. • Feature usage below 50%, NPS ≤ 6, and 11+ annual support tickets were the strongest rule-based warning indicators.	• Prioritize retention outreach to High-Risk Business and Enterprise accounts because they represent the largest revenue exposure. • Review the Starter plan pricing/value proposition, especially for monthly customers. • Introduce proactive engagement for customers with feature usage below 50%. Escalate accounts with low NPS and high support-ticket volume to customer-success teams.

Risk model: +1 for feature usage <50%, NPS ≤6, and 11+ support tickets. Customers scoring 2–3 are classified as High Risk.
